Infectious Diseases and Pathology of Reptiles Oct 25 2020 Infectious Diseases and Pathology of Reptiles, Second Edition provides definitive information on every aspect of the anatomy, pathophysiology, and differential diagnosis of infectious diseases affecting reptiles. It features stunning high-quality color photos of normal anatomy and histology, as well as gross, light, and electron microscopic images of infectious diseases of reptiles. Editor Elliott Jacobson draws on his own photography collection, and his wealth of experience spanning over 40 years in the research of infectious diseases and veterinary care of reptiles. Beginning with a thorough review of the biology, anatomy, and histology of reptiles, the introductory chapters cover all major systems and provide the most complete single source for color images of reptile histology. The book addresses the mechanism of reptile immunology and the response to pathogens, and explains how immunological response is key to

differential diagnosis. It provides an overview of electron microscopy, complete with electron micrographs of reptile pathogens, and introduces the necessity of molecular methods for diagnosis. Finally, the book devotes several chapters to the viral, bacterial, fungal, and parasitic diseases known to reptiles and methods for isolating these pathogens. Diseases of Shade Trees Aug 03 2021 Diseases of Shade Trees provides an introduction to tree diseases for students and others concerned with the care of shade and ornamental trees.

Diseases of woody plants fall into two major categories: infectious diseases and noninfectious diseases. Part I of the book presents the infectious pathogens and the diseases they cause. These include bacteria, mycoplasmas, nematodes, seed plants, and viruses. The nature of the fungi is also presented, with separate chapters for leaf, root, rust, stem, and wilt diseases caused by fungi. Wound diseases, which

are associated with both fungi and bacteria that invade wounds, are included in this section. Part II deals with noninfectious agents and the diseases they cause. Noninfectious agents are separated into environmental stress, animal injury, and people-pressure diseases. Diebacks and declines—complex diseases, which are often caused by a combination of both infectious and noninfectious agents are also included in this section. Part III on special topics includes discussions of nonpathogenic conditions often mistaken for diseases; diagnosis of tree diseases; and living hazard trees.

The Convergence of Infectious Diseases and Noncommunicable Diseases Mar 10 2022 On June 11 and June 12, 2019, the National Academies convened a workshop to explore the growing understanding of how the interplay between humans and microbes affects host physiology and causes noncommunicable diseases. Discussions included an overview of colliding epidemics, emerging research on associations between infectious and noncommunicable diseases, risks posed by chronic diseases to the development and severity of infectious diseases, and the influence of the microbiome. Workshop participants also examined the challenges and opportunities of convergence, the integration of health care delivery models and interventions, potential approaches for research, policy, and practice in the immediate-term, and potential directions for

the long-term. This publication summarizes the presentations and discussions from the workshop.

Non-Communicable Disease Prevention Sep 16

2022 Non-communicable diseases (NCDs) are the leading cause of death worldwide, contributing to over 73% of all deaths annually. Each day NCDs cause more than 100,000 deaths, 80% of which occur in low- and middle-income countries. NCDs, however, are largely preventable, and a great deal of technical knowledge exists about how to prevent and manage them. Why, then, have we, as a global community, not been more successful at reducing this NCD burden? Does a universal problem not have a universal solution? Created by an international consortium of experts, this informative and accessible book provides practical guidelines, key learning points, and dynamic, real-world case studies to aid NCD program managers, policy officers and decision-makers in low- and middle-income countries, so that they can assess interventions for the prevention and control of NCDs. The book was

commissioned by the Prince Mahidol Award Conference (PMAC), an annual international conference centred on policy of global significance related to public health. *Non-Communicable Disease Prevention: Best Buys, Wasted Buys and Contestable Buys* emphasises the importance of context in NCD control and prevention, arguing that the success of an intervention lies in an ability to respond to local needs and environments. The book comprises ten chapters, which collectively explore the reasons behind, and strategies for, preventing and managing the NCD burden. It spans key themes such as political economy, the transferability of economic evidence, the role of cross-sectoral policies, the importance of deliberative processes, and health technology assessment. This book is written for the benefit of the global health community, and is primarily targeted at those individuals who are involved in NCD programs. This book will also be of interest to NCD champions, policy advocates, and

educators spearheading the movement for increased visibility of NCDs. This work was published by Saint Philip Street Press pursuant to a Creative Commons license permitting commercial use. All rights not granted by the work's license are retained by the author or authors.

Models for Infectious Human Diseases Apr 18 2020 Infectious disease accounts for more death and disability worldwide than either

noninfectious disease or injury. This book contains a number of different quantitative approaches to understanding the patterns of such diseases in populations, and the design of control strategies to lessen their effect. The papers are written by experts with varied mathematical expertise and involvement in biological, medical and social sciences. The volume increases interaction between specialties by describing research on many infectious diseases that affect humans, including viral diseases, such as measles and AIDS, and tropical parasitic infections. Sections deal with problems relating to transmissible diseases with long development times (such as AIDS); vaccination strategies; the consequences of treatment interventions; the dynamics of immunity; heterogeneity of populations; and prediction. On each topic, the editors have chosen papers that bring together contrasting approaches via the development of theoretical results, the use of relevant knowledge from applied fields, and the

analysis of data.

The Geography of Non-infectious Disease

Sep 23 2020 Geographical studies of disease patterns are essential for illuminating the role of environmental factors in the etiology of disease, particularly in relation to cancer and coronary heart disease. This book surveys the global distribution of non-infective disease, rectifying an imbalance in studies of this kind by emphasizing work done in developing countries. It is important reading for all general physicians, surgeons, and specialists, and will stimulate continued geographical epidemiological study in all parts of the world. Public health and community medicine specialists, geographers, and social scientists concerned with environmental determinants of health and disease will also find this book to be useful.

[An Introduction to Population-Level Prevention of Non-Communicable Diseases](#) Apr 30 2021

Non-communicable diseases (NCDs) are the

single biggest cause of death in the world. They include cardiovascular diseases, such as heart attacks and stroke, cancers, chronic respiratory diseases, like chronic obstructed pulmonary disease and asthma, and diabetes. The World Health Organization published a 'Global Action Plan for the prevention and control of NCDs 2013-2020' which set a target to reduce death rates from NCDs by 25%. In response, countries are drawing up national level NCD prevention policies and programmes. New units have been set by governments, NGOs, and other organisation to drive this agenda forward creating a need for capacity building and training. Until the Nuffield Department for Population Health at the University of Oxford initiated an accredited six-day short course on Prevention Strategies for Non-Communicable Diseases with a population-based approach, many attempts to engage with NCD prevention centred on individual-level interventions, such as screening and treating individual patients. In

this new book, the course leaders bring together the entire scope of the population-based approach and provide a solid introduction to the concepts, evidence, and methods that define it. 'An Introduction to Population-Level Prevention of Non-Communicable Diseases' takes readers through the policy cycle from problem definition, solution generation, capacity building, and implementation to evaluation and monitoring. The book includes a wide range of case studies, and practical examples of plans and projects which illustrate real-life application of theory. This book provides an unparalleled overview of population-based approaches to the prevention of non-communicable diseases, reflecting the latest research in the field. It will be a key resource for anyone with an interest in NCD prevention, with particular relevance to early-career professionals working on NCD prevention in governments, NGOs, health care institutions, and universities, as they develop the knowledge and skills required for effective population-based

prevention strategies.

specialists apply a rational approach to the diagnosis and treatment of infectious conditions.

Clearly explains the rationale of opting for one particular treatment or length of course over

another in order to arrange appropriate

management and follow-up. Provides focused ID

decision support to questions such as: What diagnostic test should I order? What is the

correct antibiotic for this patient/geographical

region? Are IV or oral antibiotics most

appropriate? How long should the antibiotic

course be and when should it be de-escalated?

What special considerations should be taken in immunocompromised patients? How often

should complex infections be followed up? Uses

a succinct, easy-to-read writing style, following a consistent format: Important

characteristics/epidemiology; Clinical related

data; Rash characteristics; Ancillary diagnostic studies; Treatment; and Other. Provides visual

Global Handbook on Noncommunicable Diseases

and Health Promotion May 12 2022 Global Handbook on Noncommunicable Diseases and Health Promotion David V. McQueen, editor A scan of health challenges around the globe readily brings to mind a range of infectious illnesses, from HIV to influenza. Yet chronic non-contagious conditions--heart disease, asthma, diabetes, cancer--are more prevalent, and their rates soaring, across the developed and developing worlds. The Global Handbook on Noncommunicable Diseases and Health Promotion is an important resource for understanding and approaching chronic illnesses and their prevention. This timely text balances theory and strategies to provide an integrative context for health-affecting behaviors regarding tobacco use, food choices, and physical activity. Coverage expands on current medical/clinical public health perspectives, arguing that closer attention to social context is crucial to better use of health resources and more relevant preventive efforts. Possible roles for hospitals,

the workplace, government agencies, NGOs, and other institutions are analyzed, as is the potential for addressing larger underlying health factors (e.g., inequities and poverty) at the societal level. Topics covered include: The nature of causality: beyond traditional evidence Learning from the social sciences in chronic disease health promotion Contextual factors in health and illness Understanding and applying a social determinants of health framework for addressing NCDs Public health, NCDs, health promotion and business partnering NCDs and civil society: a history and a roadmap As the authors of the Global Handbook on Noncommunicable Diseases and Health Promotion make abundantly clear, opportunities are as numerous as the issues, and researchers and graduate students in global public health, health promotion, and chronic disease epidemiology will find these chapters positive and realistic.p>

Chronic Non-communicable Diseases in Low and Middle-income Countries Dec 15 2019

Low and middle income countries in Africa, Asia and Latin America bear a significant proportion of the global burden of chronic non-communicable diseases. This book synthesizes evidence across countries that share similar socio-economic, developmental and public health profiles, including rapid urbanization, globalization and poverty. Providing insights on successful and sustainable interventions and policies, it shows how to slow and reverse the rising burden of chronic diseases in resource-poor settings.

The Role of Microbes in Common Non-Infectious Diseases

Nov 25 2020 This new volume in the series Emerging Infectious Diseases of the 21st Century is a novel book on the role of microbes in the pathogenesis of common and disabling non-infectious diseases. New insights have emerged over the past several years suggesting that our commensal microflora of the gut is extremely important in regulating physiological and immune functions of the body. Covered are the perturbations of the normal composition of our endogenous microbiota, influenced by diet and genetic predispositions, as well as the mechanisms to produce common disorders such as obesity, diabetes, irritable bowel syndrome, colon cancer and atherosclerotic vascular diseases. Also explored is the evidence suggesting that predisposition to increasingly common afflictions such as asthma and multiple sclerosis is influenced, in combination with our genetic composition, by early life exposure to

environmental microbes and the time of onset of common viral infections. Chapters provide the most recent information on these disorders with regards to epidemiology, current concepts on pathogenesis and mechanisms of their biology, recent research and data on the role of microbes, analysis of their validity and conclusive remarks and areas for future research. The Role of Microbes in Common Non-Infectious Diseases is an excellent resource for both physicians and investigators from a broad range of disciplines that will help to stimulate new concepts of disease pathogenesis and lead to the unraveling of their mechanisms of diseases and to novel treatments.

Gender and Genes Jun 01 2021 This Yearbook of Women's History (Jaarboek voor Vrouwengeschiedenis) is dedicated to Gender and Genes. Intruding upon our everyday lives, the world of DNA, genes and genomics has become a challenging field of research, both clinical and biomedical as well as socio-cultural. It is also a challenging topic for a Yearbook which traditionally focuses on women and gender from a historical point of view. Gender issues are part and parcel of genes and genomics in scientific research and socio-cultural discourses and representations. Current literature on genes and genomics does not abound in analyses of biomedical and socio-cultural realms where gender aspects are played out and exchanged. This Yearbook may thus contribute to a field of analysis which contextualizes history from the viewpoint of current biotechnological developments. This volume contains articles on medical cases (reproductive testing and the case of the sex

chromosomes, and framing cancer risk in women and men), cultural representations, a portrait of female scientist Rosalin Franklin and interviews with feminist science philosophers Katarina Karkazis and Donna Dickenson.
