For Undergraduate Courses in Management Information Systems MIS Essentials provides instructors with a brief text that will cover the basics of how information systems are used to solve business problems. In the 21st Century, every business professional must be able to effectively use information systems, and MIS Essentials prepares students to do just that. Based on the author's successful Experiencing MIS, this text presents the core concepts and relevant outside topics of MIS for professors to cover in a one-semester course. When surveying the computer technology available for working out mathematical problems, one fact quickly becomes apparent-most personal and super- computers are not designed for computation. Without the aid of costly and often only partially compatible software programs, most computer operating systems cannot perform mathematical computations. Mathematics textbooks and handbooks provide useful equations, but they do not offer accessible means for evaluation. The HP48SX, an object-oriented computer containing a custom CPU and operating system, is

designed specifically for this task. With a low-cost computer chip and an inexpensive calculator, the HP 48SX Engineering Mathematics Library: An Introduction to Symbolic and Complex Computation with Applications package offers users an affordable and versatile alternative for solving simple and complex problems.

Through this Guide, learn how to use your HP Prime calculator or Apple, Android, Window app to help you learn Algebra. This Guide covers your device, whether you have the handheld calculator or iPhone, iPad, Android Phone, Android Tablet, Chromebook, or Window Tablet Free or Pro app. The Guide starts with basic Algebra rules and progresses to how Algebra rules are used in Calculus. You can readily use this Guide if you are in Pre-Algebra, Algebra I, Introductory Algebra, Algebra II, Intermediate Algebra, College Algebra, Precalculus or any higher course where Algebra is a prerequisite. The calculator's screens are used in the introduction of a new topic. The nice thing is the app's screen and interface is identical to the calculator. Through its examples and its accompanying exercise, this guide provides a Rosetta Stone effect with the language of math. Each example and its quick-check interactive exercise show both the HP Prime and the traditional step-

by-step solution. A powerful feature that you will want to learn is the creation of global libraries and Application Library apps. This Guide illustrates the steps needed for creating a global library or Application Library app and using the library's commands or the Application Library app's features. Global libraries and this Guide's technique allow you to define a single or multiple one-line functions on a page. Global one-line functions can be any formula found in a book, new tool commands, or a set of functions that help with the understanding of complex math concepts. There are examples of all of these in this Guide. Learn how to create and run both kinds of Application Library apps, ones that run from the Application Library screens and ones that run from the Home view or CAS view. Use this Guide and the HP Prime CAS technology to submit assignments that are error free. When you happen to have difficulties with a step, you can use your HP Prime CAS device to help you work that step until you master it. The first of its kind, this modern, comprehensive text covers both analysis and design of piping systems. The authors begin with a review of basic hydraulic principles, with emphasis on their use in pumped pipelines, manifolds, and the analysis and design of large pipe networks. After the reader obtains an understanding of how these principles are implemented in computer solutions for steady state problems, the focus then turns to unsteady hydraulics. These are covered at three levels: For use in an introductory circuit analysis or circuit theory course, this text presents circuit analysis in a clear manner, with many practical applications. It demonstrates the principles, carefully explaining each step. Use HP-48 G/GX graphing calculator technology to aid in the computation and visualization of key subjects in the mathematics sequence: Calculus, Differential Equations, Vector Calculus and Linear Algebra. 'Physics' is designed for the non-calculus physics course. Content is built through extensive use of examples, with detailed solutions, designed to develop problem solving skills.
