A Guide to Marx's 'Capital' Vols III Apr 11 2022 This book provides a comprehensive guide to all three volumes of Karl Marx's 'Capital', with advice on further reading and points for further discussion. Recognizing the contemporary relevance of 'Capital' in the midst of the current financial crisis, Kenneth Smith has produced an essential guide to Marx's ideas, particularly on the subject of the circulation of money-capital. This guide uniquely presents the three volumes of 'Capital' in a different

order of reading to that in which they were published, placing them instead in the order that Marx himself sometimes recommended as a more user-friendly way of reading. Dr Smith also argues that for most of the twentieth century, the full development of the capitalist mode of production (CMP) has been undermined by the existence of a non-capitalist 'third world', which has caused the CMP to take on the form of what Marx called a highly developed mercantile system, rather than one characterized by an uninterrupted circuit of industrial capital of the kind he expected would develop. While the guide can be read as a book in its own right, it also contains detailed references to Volumes I-III so that students, seminars and discussion groups can easily make connections between Smith's explanations and the relevant parts of 'Capital'.

Fertility, Food and Fever Sep 04 2021 Combining historical geography with historical demography, and conceived as a study in environmental history, this book examines the long-term relationship between population, economy and environment in the northern half of the Indonesian island of Sulawesi.

Languages of Science in the Eighteenth Century Feb 26 2021 The eighteenth century is an important period both in the history of science and in the history of languages. Interest in science, and especially in the useful sciences, exploded and a new, modern approach to scientific discovery and the accumulation of knowledge emerged. It was during this century, too, that ideas on language and language practice began to change. Latin had been more or less the only written language used for

scientific purposes, but gradually the vernaculars became established as fully acceptable alternatives for scientific writing. The period is of interest, moreover, from a genre-historical point of view. Encyclopedias, dictionaries and also correspondence played a key role in the spread of scientific ideas. At the time, writing on scientific matters was not as distinct from fiction, poetry or religious texts as it is today, a fact which also gave a creative liberty to individual writers. In this volume, seventeen authors explore, from a variety of angles, the construction of a scientific language and discourse. The chapters are thematically organized into four sections, each contributing to our understanding of this dynamic period in the history of science: their themes are the forming of scientific communities, the emergence of new languages of science, the spread of scientific ideas, and the development of scientific writing. A particular focus is placed on the Swedish botanist Carl Linnaeus (1707-1778). From the point of view of the natural sciences, Linnaeus is renowned for his principles for defining genera and species of organisms and his creation of a uniform system for naming them. From the standpoint of this volume, however, he is also of interest as an example of a European scientist of the eighteenth century. This volume is

unique both in its broad linguistic approach - including studies on textlinguistics, stylistics, sociolinguistics, lexicon and nomenclature - and in its combination of language studies, philosophy of language, history and sociology of science. The book covers writing in different European languages: Swedish, German, French, English, Latin, Portuguese, and Russian. With its focus on the history of scientific language and discourse during a dynamic period in Europe, the book promises to contribute to new insights both for readers interested in language history and those with an interest in the history of ideas and thought.
