Followers of Jesus need not fear hard questions or objections against Christian belief. In *A Reasonable Response*, renowned Christian philosopher and apologist William Lane Craig offers dozens of examples of how some of the most common challenges to Christian thought can be addressed, including: Why does God allow evil? How can I be sure God exists? Why should I believe that the Bible is trustworthy? How does modern science relate to the Christian worldview? What evidence do we have that Jesus rose from the dead? Utilizing real questions submitted to his popular website ReasonableFaith.org, Dr. Craig models well-reasoned, skillful, and biblically informed interaction with his inquirers. *A Reasonable Response* goes beyond merely talking about apologetics; it shows it in action. With cowriter Joseph E. Gorra, this book also offers advice about envisioning and practicing the ministry of answering people's questions through the local church, workplace, and in online environments. Whether you're struggling to respond to tough objections or looking for answers to your

own intellectual questions, A Reasonable Response will equip you with sound reasoning and biblical truth. EVERYTHING YOU NEED TO HELP SCORE A PERFECT 5! After reading nonfiction passages about science, geography, or history topics, students answer multiple-choice and short-answer questions to build seven essential comprehension skills. A noted biblical scholar's concise responses to a wide range of the questions most frequently posed to him about the Bible. + Build student understanding of main idea and theme through leveled text-dependent question stems. Engage each student at their level with these dynamic questions! Over one billion people use the Internet globally. Psychologists are beginning to understand what people do online, and the impact being online has on behaviour. It's making us re-think many of our existing assumptions

about what it means to be a social being. For instance, if we can talk, flirt, meet people and fall in love online, this challenges many of psychology's theories that intimacy or understanding requires physical co-presence. "The Oxford Handbook of Internet Psychology" brings together many of the leading researchers in what can be termed 'Internet Psychology'. Though a very new area of research, it is growing at a phenomenal pace. In addition to well-studied areas of investigation, such as social identity theory, computer-mediated communication and virtual communities, the volume also includes chapters on topics as diverse as deception and misrepresentation, attitude change and persuasion online, Internet addiction, online relationships, privacy and trust, health and leisure use of the Internet, and the nature of interactivity. With over 30 chapters written by experts in the field, the range and depth of coverage is unequalled, and serves to define this emerging area of research. Uniquely, this content is supported by an entire section covering the use of the Internet as a research tool, including qualitative and quantitative methods, online survey design, personality testing, ethics, and technological and design issues. While it is likely to be a popular research resource to be 'dipped into', as a whole volume it is coherent and compelling enough to act as a single text book. "The Oxford Handbook of Internet Psychology" is the definitive text on this burgeoning field. It will be an essential resource for anyone interested in the psychological aspects of Internet use, or planning to conduct research using the 'net'. Help students appreciate texts and

write about them with conviction. Responding to a comprehension question is a surprisingly complex task. It draws on multiple skills: students must be able to read and analyze a text passage; consider what aspect of the text the question addresses; and then quickly and concisely write about their ideas, citing evidence to support them. Hence the prominence of constructed-response questions in standardized testing. In this refreshingly clear and upbeat guide, literacy consultant Nancy Boyles gives a step-by-step demonstration of how to help students achieve success with this task—and in the process of unpacking the steps involved, demonstrates how the instruction can inspire teachers' creativity as well as deepen students' literacy skills. Filled with ready-to-use scaffolds for every stage of instruction—sets of sample questions, anchor charts, cue cards, answer frames—this is a one-stop resource for teaching students how to organize their thoughts about what they've read, and then set them down in writing. Our busy lives confront us with multiple questions that need to be answered every day. We may come across questions in our lives that we can answer ourselves; while there are other questions we would like a second opinion. Then there are questions to which we simply do not know the answer. Proposed is WhichOne, a Web 2.0 application that allows users to obtain answers from other people. The proposed social networking tool named WhichOne, allows a user to quickly prepare a question and share it with others. Using social networking tools shortens the time delay of getting responses. It also allows for a quick computation of statistics associated with multiple answers, and for an access

to a large number of potential individual or group responders. A user can create a poll and list possible responses to the poll. Polls have a close time where people can vote until they are closed for voting. WhichOne is a prototype and has been active for over half a year now and received a variety of polls and responses from several users. WhichOne obtains a faster response than email and phone calls because users using a desktop are able to share their polls using the AddThis service, which provides 300 different options for sharing their poll. When using WhichOne's mobile application available on Android, users are able to share their poll using the sharing options available on their phone, this includes but is not limited to Twitter, Facebook, texting, and Google hangout. Email is slower than WhichOne because emails have a tendency to not receive a response for several days, maybe weeks. Calling on the other hand is an intrusive and slow option especially with a multi respondent poll. Important findings were: i) student performance on multiple-choice chemistry questions was significantly higher than performance on short-answer questions regardless of the content and ii), the performance of males was significantly higher than that of females in upper levels of achievement but not at the lower levels of achievement. Possible factors accounting for the observed difference were noted. Implications of these findings are discussed as well as suggestions for further research. Why did I choose to name this collection "Western Questions, Eastern Answers"? Philosophy and science in the West have largely been practiced with the aim to understand the present world. A number of theories

have been propounded, none of which are free of problems. Philosophy and science in the East (specifically the Vedic tradition) has always been practiced with the aim to transcend the world. Vedic texts provide many theories, but always in answer to a transcendental question. On one hand, therefore, we have questions that haven't found good answers. On the other, there are very good answers that haven't been connected to the burning questions of mankind today. Combining them makes a lot of sense from both sides, although I believe this type of approach to a 'synthesis' of religion and science hasn't been attempted before. Clearly, to repeat the same answer but in response to a different question, and the answer to still make a lot of sense, we must understand not just the questions and answers, but also the other answers that were earlier given for the same question, and how the new answer is better. That is not just a demand on the author; it is an equally difficult demand on the reader as well. But that's the price to be paid if there is indeed a long history of incorrect answers which have to be rejected before a correct answer would be accepted. After all, we might still do the right thing, if only as the option of last resort. My aim is to provide the answers that were previously given in response to radically different questions, but now in response to the questions that currently remain unanswered. Many people have tried to marry the intellectual and ideological views of East and West, sometimes with hilarious and disastrous results. This attempt is therefore not without considerable risks, although the effort is worth the trouble. All animals are equal but some animals are more equal

than others. It's just an ordinary farm - until the animals revolt. They get rid of the irresponsible farmer. The other animals are sure that life is improving, but as systems are replaced and half-truths are retold, a new hierarchy emerges . . .
